

back in the spotlight

if you drive a big car or sport-utility, these reversing cameras are a boon for safety – and your rear bumper

It happened one night after a golf tournament. Backing out of the parking lot moving about five kph and...scrunch. A three-foot-high pole did in the bumper of our SUV. It wouldn't have been a problem if we had equipped our ride with one of these. Clockwise from top: One of my favourites – and from a Canadian company – the **MSC** rear-view mirror (\$349; www.auto-i.ca) clips over your existing mirror for installation and it can play DVDs. Mount the configu-

urable base of the 3.5-inch **BC35-U** on any surface and pivot for best viewing (\$400; www.auto-i.ca). The **MVH-560** headrest monitor offers a huge viewing angle, great colour and plays DVDs – which you can control with the included credit-card-sized remote. (\$550; www.vivoelectronics.com). The **inSIGHT** from Mobile Optics (\$500; www.mobileoptics.com) gives a crisp, clear image. **The truck: 2006 XC90 V8** (\$65,395; www.volvocanada.com) from Volvo.

GRAB LIFE BY THE HORNS 
DODGE

MEAN AND LEAN.
